

Repository Clone Instructions and branch creation

Go to directory where you want repository cloned repository and run the following commands:

- 1) To clone repository

```
git clone git@github.com:mregpala/project-national-park-performance.git
```

- 2) Change directory to repository directory

```
cd project-national-park-performance/
```

- 3) Create new branch. Change mike to your name.

```
git branch developer-mike
```

- 4) To work in branch you must check it out.

```
git checkout developer-mike
```

- 5) Create local branch on remote server

```
git push --set-upstream origin developer-mike
```

The following is the link to remote repository: <https://github.com/mregpala/project-national-park-performance>

Make sure you work in your repository as you make changes (git checkout developer-mike). After you commit and push changes to branch create a pull request, so your changes can be reviewed before merged to main.
